## Purpose

The purpose of the app is to order pizza from one of the biggest branches over the world in a very easy way by the app in your mobile device.

First, the users are the ones who got have mobile phone and access to the store gallery where they can download the app immediately.

Second, the app requires the customer to hold a bank account in Sweden so you can pay from your account in several options that in the end you will choose.

Another point is that you need to be close in a distance to the Domino's pizza stores since they are in south of Sweden if you are planning a delivery.

The app designed for the users who wants to have one of the most popular quality pizza either by delivery or by take away.

The tests on the app were made to find bugs and to test the functionality of the app, the experience of using it in several situations and to see if it serves what it should.

## Application Overview

Domino's Pizza is a global pizza delivery and takeaway all around the world that started since 1960 in the USA that with the time grew up to be the world's largest pizza chains.

The company offers a wide range of pizzas, as well as side dishes like chicken wings, pasta, and desserts.

Domino's has introduced features like online ordering, mobile apps, and the Domino's Tracker, allowing customers to track their orders in real-time.

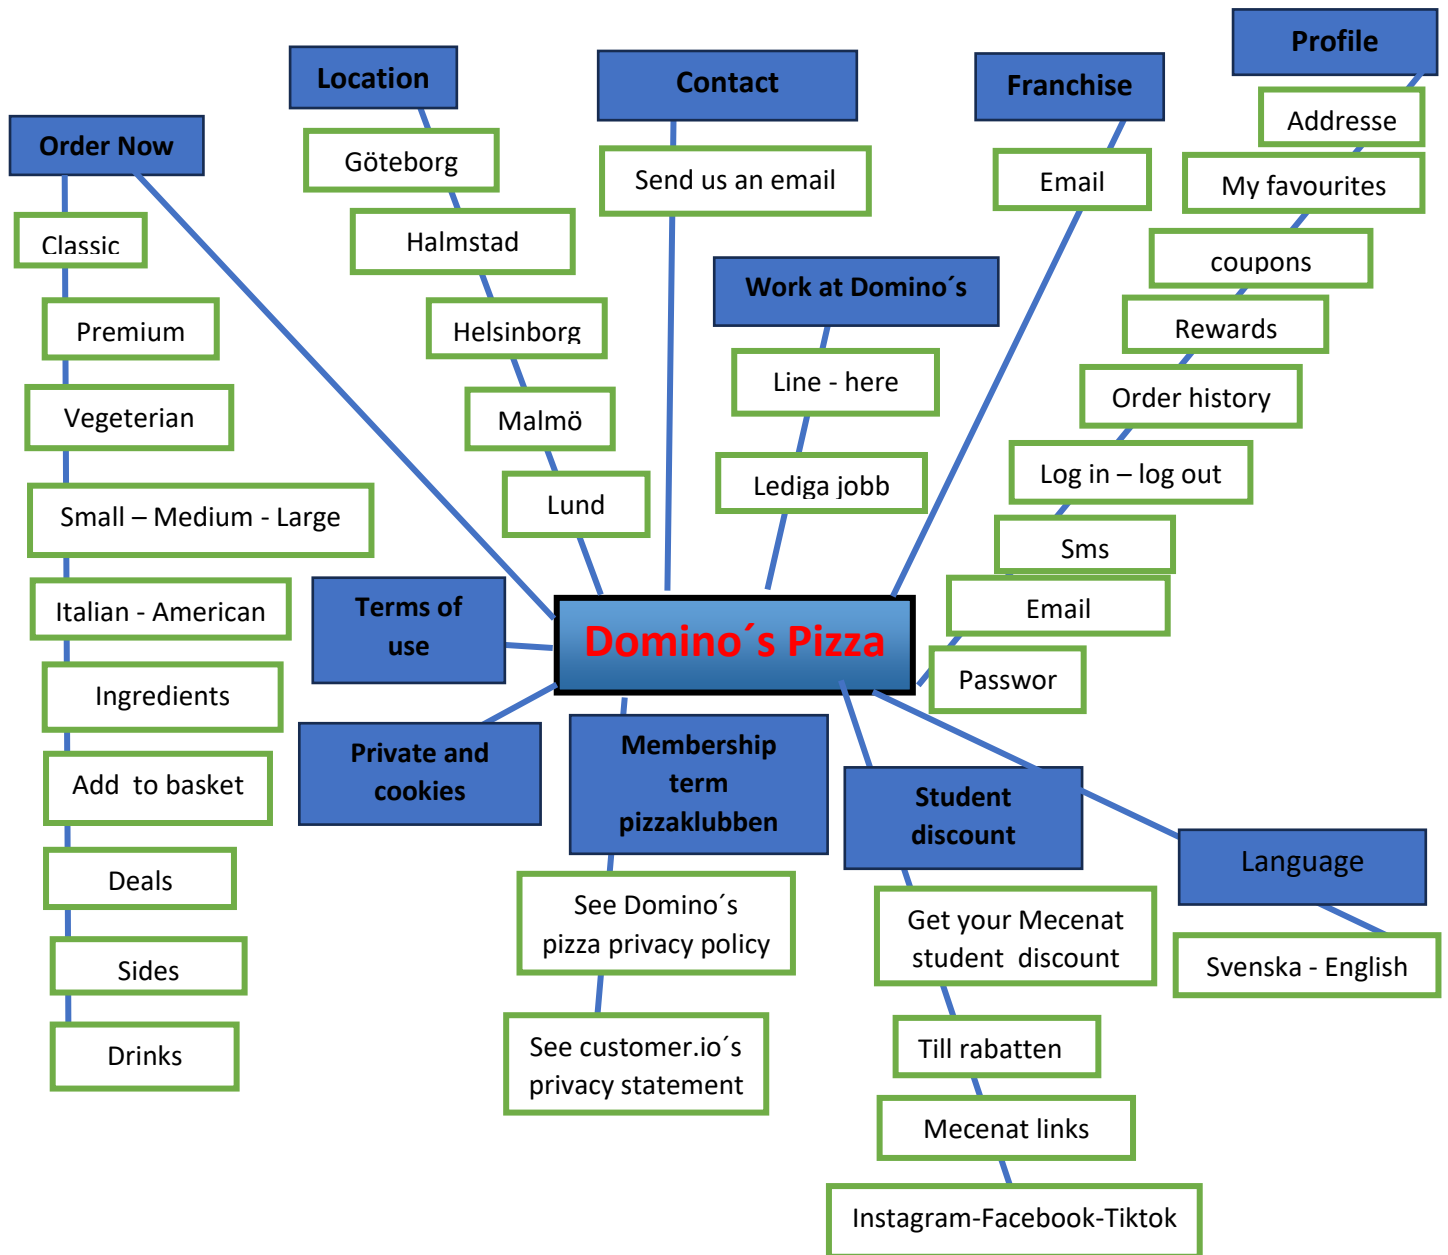

Users can easily choose their pizza orders with a wide range of toppings, and sizes to suit their preferences. The app provides a user-friendly interface for selecting and modifying pizza orders.

The app synchronized with the availability of the restaurant that the customer is ordering from and also gives the ability to order and have the option to choose the time and the date that the pizza will be ready for a pick-up or delivery which is a big progress from other apps since it gives the user a fully control on his decision.

There is also possibility to track your order status in real-time, from preparation to delivery, using the app's tracking feature.

The Domino's Pizza app provide an explanation overview of allergies in their pizzas, side dishes and dessert

## Testing tree

## Testing scope

The testing scope on the app defines what will be tested, the features, functions, and aspects of the software that will be tested, as well as any specific situation that will be tested and conditions or scenarios that will be covered.

The testing scope also will sum up what will be included in the testing scope is what is excluded. The scope document explicitly defines any features, functionalities, or scenarios that will not be tested.

In overall we would like to have a clear and structured framework for planning, executing, and managing testing activities. It helps to understand the scope and boundaries of testing efforts and contributes to the successful delivery of high-quality software products.

### In Scope :

#### Functional Testing

- Testing the app functionality by entering to the “Home” tab and writing one of the addresses branches to see if it leads us to the right page.
- Testing the app by making a purchase of choosing a pizza, adding sides, drinks. Adding toppings and several different Ingredients to the pizza from the options that the app offers.
- Testing the “Locations” tab for each branch that will show us the opening hours, address, and phone number to contact the restaurant.
- The apps show us the best route for arriving from my location to the restaurant location.
- Through the “Profile” tab I will register the app by writing down all my correct details as the system is asking me.
- I will try to Log in to the app after registered by SMS or email.
- Pressing the “Menu” tab will open for me several options to test.
- Sending an email to the customer service by “Contact us” and receive a response back within 24 hours.
- “Work at Domino’s” tab will show us the different types of jobs that in the app regarding information of the job, skills required and location branch.

#### Boundary values

- Trying to write addresses that do not exist, and the app gives me notification for their store’s locations, and I get message that what I typed is not exist.
- Trying to test the app in the limit number of pizzas that I can purchase for each kind.
- Trying to order delivery to a location which is far away from the restaurant and receiving a message that they can’t supply me the delivery because of far distance.
- Trying to order after the open hours’ time of the restaurant and receiving other alternatives for new time schedule when next time the place will be open again.

## UI Testing

- The photos of each dish on the menu describes to details every little thing the way it should look like.
- The menu is clear and show us clearly where each tab will take us, and the fonts are big enough to understand.
- Subtitles are highlighted and goes from big to small according to the importance of the information.
- The whole app is colourful, especially in the logo colours that show you that you are in Domino's pizza app after all.
- It is very easy to navigate in the app, every tab takes you exactly where you need, and it connected to other apps like google maps.
- Every page describes and show us the content in best way and very friendly to the user.
- Photos are at right size and in a good resolution, so it is very comfortable to watch.

## UX testing

- It is very comfortable to scroll down and up through the app only with one finger.
- Ordering a pizza is very easy, the tabs direct me straight to the pizza menu which easy to find.
- Selecting items like sides or customizing toppings, choosing delivery or pickup options, and completing the payment are very clear in overall.
- When it comes to Navigation in the app, it seems that users can easily find the menu since it is very highlighted, they can find also promotions for deal which are already in the main page or in the student's discounts.
- Store locators help to find the branches through the menu or through google maps that connected to the app or through searching for address.
- Whenever I get errors or results which weren't found, I am getting a different solution.
- The experience of log in and register is very easy, only click on "Register" and you got exactly all the option infront of you that leads you to where you want.
- Sending a message to the customer service made them to respond quickly.

## Compability testing

- The tests were made on two versions of phones:  
One plus 11 5G  
Android version : 14  
Samsung Galaxy S10  
Android version 12

### Interrupts Test

- I could easily get notifications like regular messages by SMS.
- I got notifications to my phone through external apps like WhatsApp or Gmail while I am surfing in the Domino's pizza app.
- I could get phone calls while I am surfing the app and answer the calls, once I finished the phone call I could go back easily to my activity in the app.
- The Domino's pizza app continues to work perfectly while I'm having a lot of applications in the background that still working.
- I could send a call out from my phone while I was surfing the app.

### External Interface Test

- The app was connected to other applications in order to served other services to the customers; one of them is Google maps which helps to locate the exact address of the requested restaurant or to show direction to it from my position.
- The app connected to "Mecenat" app that provides discounts for students.

### Installation Test

- I download the app from the app store, the process was easily and downloading went quickly.
- I deleted the domino's pizza app and download it again, the app asked me if I would like to log in by my old account which means that the app remember my password and my email still existed in the system.

### Security Test

- After 4 times of trying to log in to the app but with wrong email or wrong phone number, I receive a message to my phone with a code for verification for my identity.
- When I logged in to the app, it kept all my details as I wrote and my information.

### Money Transfer Test

- I can have a few options for the payment by card, Klarna or Swish.

### Localization Test

- The app connected to google maps which can show us our location since it's connected to our Gps as well and can give us our location and the direction to any branch of Domino's pizza in Sweden according to the app.
- I can switch languages between English and Swedish and the app will be changed according to the language that I chose.

## Out of Scope :

- Internal interface test of the phone was not tested since there are no usability in the camera, mic, Bluetooth or phone headphones or speakers.
- I couldn't test the app with performance test since the tools I have are not suits for apps with log in but I could see clearly that the app download took a few seconds and same with uploading the app from my mobile phone.
- Accessibility test wasn't done since we don't have features of accessibility on the app
- Loading test wasn't done since I don't have right now the tools to check this.

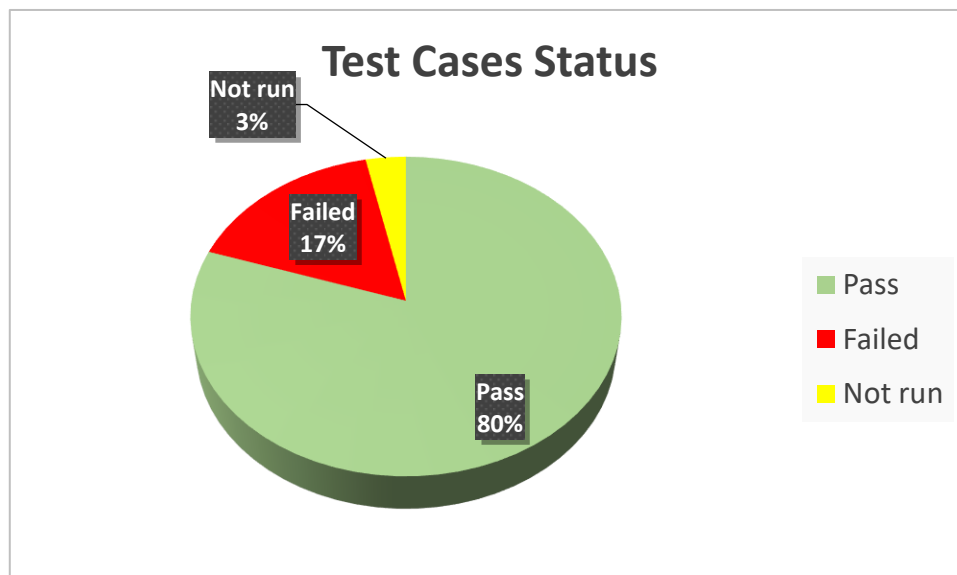

## Metrics

The chart pie represents the tests that were done on the app Domino's pizza.

We can clearly see the tests that were done and passed and the ones that were failed to pass through the several types of charts and graphs.

### Test cases Status

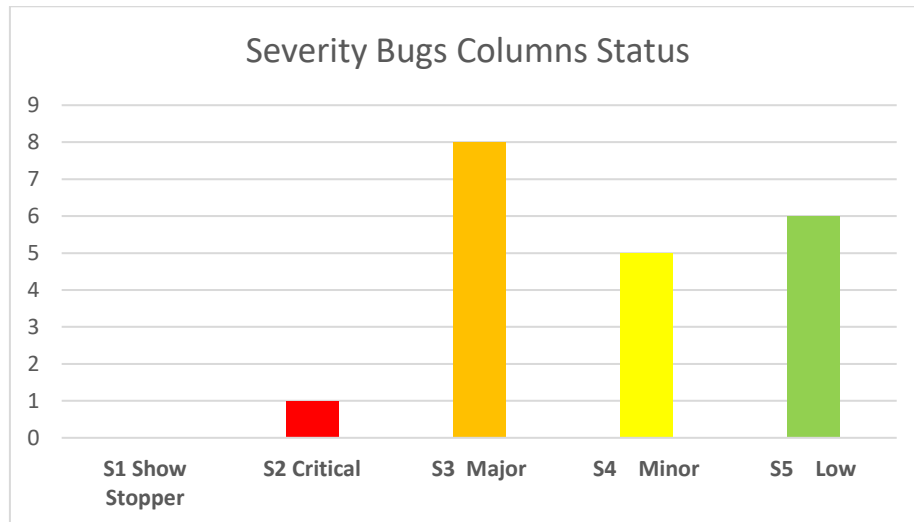

Pass	Failed	Not run	Total
97	20	4	121

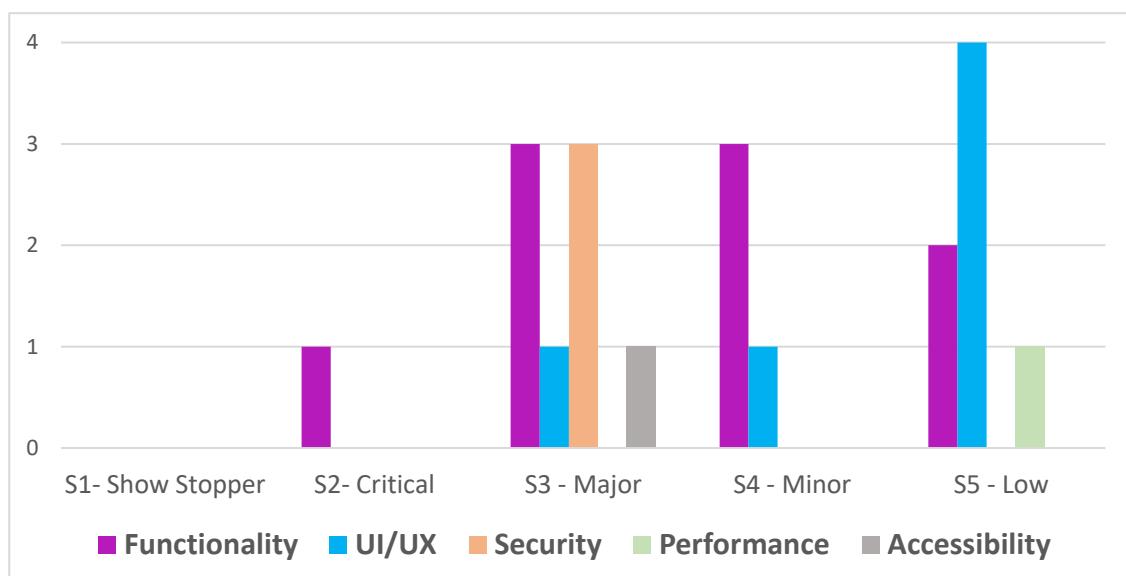

### Severity Bugs Status

S1 Show Stopper	S2 Critical	S3 Major	S4 Minor	S5 Low	Total
0	1	8	5	6	20

### Defects Distribution-Module Wise

	Functionality	UI/UX	Security	Performance	Accessibility	Total
S1- Show Stopper	0	0	0	0	0	0
S2- Critical	1	0	0	0	0	1
S3 - Major	3	1	3	0	1	8
S4 - Minor	3	1	0	0	0	4
S5 - Low	2	4	0	1	0	7
Total	9	6	3	1	1	20

## Recommendations

1. Adding an accessibility option for the population who use this app and having difficulties and disabilities.
2. When it comes to functionality, I recommend improving the ability to add and remove options of topping when a customer making a reservation because it is very common and one of the most actions that happen during a reservation.
3. When it comes to user experience, make sure that the spaces between the words are the same and words are not being cut in the chart so everything will be understood
4. When it comes to Security test, I would expect that the app system wouldn't accept unnecessary notes when writing my personal details.

## Conclusion

After examining the Domino's pizza app, the bugs that were found mostly were on a major severity by functionality tests to low severity and on a GUI test.

I found that the highest common problem when it comes to functionality would be the fact that you are limited in adding toppings on the pizza even though that it doesn't mention that there is a limitation, same thing is when you want to delete some of the sides that you added, sometimes it works and sometimes it doesn't.

When it comes to critical severity, it fell on the personal details which I already mentioned in the recommendation section.

I must add that it is important for people with disabilities that it is important to fix an accessibility tool so it will be friendly to everyone to use it without any problem.

Besides that, the app is still functioning as it should, achieving its main objectives which is offering service to everyone who wants to order pizza by a few easy steps with a friendly app that is very clear and comfortable for the user.

The external apps that connected to the Domino's pizza app like Google maps is very helpful and clearly describe the destinations to the restaurants from my position.

Therefore, I recommend releasing the app.

## **BUGS LIST**

<b>Name</b>	<b>Description</b>
<b>DP - 1</b>	The link takes us immediately to the bottom option instead of starting from the top page
<b>DP - 2</b>	Only a few options are displayed when you write the address
<b>DP - 3</b>	Not able to copy and paste the phone number in the blank field
<b>DP - 4</b>	After changing the language, we are being taken to the page before
<b>DP - 5</b>	Email address is not linked while others' addresses are linked and can transfer you to their page
<b>DP - 6</b>	Unproportional space in between the words
<b>DP - 7</b>	The words in the chart are being cut
<b>DP - 8</b>	Unnecessary spaces between the words in the paragraph
<b>DP - 9</b>	A blank page after pressing the link
<b>DP - 10</b>	The jobs offer link will take us to another link instead of to the place it should
<b>DP - 11</b>	Pressing on the link in the English page will move me to a Swedish page
<b>DP - 12</b>	Refresh the page after being disconnected but it doesn't connect
<b>DP - 13</b>	The app white background covers the phone icons like time, date, phone percentage
<b>DP - 14</b>	Can't add more toppings after choosing several types
<b>DP - 15</b>	Adding and removing toppings from the pizza doesn't give me all the time to add again toppings
<b>DP - 16</b>	Choosing a payment method sometimes takes longer time for the system to load
<b>DP - 17</b>	The system accepts letters in the blank field box when it should only have numbers
<b>DP - 18</b>	I can add signs like @@@ at my email address when I register to student discount
<b>DP - 19</b>	Registered to the system under the full name box but with wrong signs like "%#"
<b>DP - 20</b>	Accessibility options for people with disabilities are not display on the app

### Description

#### Steps to Reproduce :

1. Enter the Domino's Pizza app
2. Click on the left top corner menu
3. Chose order now
4. Press on the option "Sides"
5. Press the option "Chicken"

**Actual Result :** You can slide the page up but not down

**Expected Result :** The options to scroll will be equal like the rest of the sides option when you can scroll down and not the opposite - up like in the chicken option.

#### Description

##### Steps to Reproduce :

1. Enter the Domino's Pizza app
2. Go to the left top menu corner and choose "ORDER NOW"
3. Choose one of the pizza's that you are interested
4. Choose the "MEAT" option or any other options
5. Add a few toppings on the right side plus button from the list and then removed them
6. Try to add again from the toppings

**Actual Result :** The plus buttons become grey, and you can't press them to choose toppings options

**Expected Result :** I would expect that I would be able to add toppings again after removing them

[DP-16] [Choosing a payment method sometimes takes longer time for the system to load](#)

Environment:	<ul style="list-style-type: none"><li>One plus 11 5G Android version : 14</li><li>Samsung Galaxy S10 Android version 12</li></ul>		

**Attachments:**

**Severity:** S4 - Minor

**Description**

**Steps to Reproduce :**

1. Enter the Domino's Pizza app
2. Go to the left top corner menu and press "ORDER NOW"
3. Choose one of the pizza you would like to purchase
4. Press on the shopping basket on the top right corner
5. View your order and press "Next"
6. Scroll down and tap the tab "Choose payment method"

**Actual Result :** Sometimes the system load itself for so long

**Expected Result :** Expect that the app won't be stuck from time to time and there will be flow

[DP-17] [The system accept letters in the blank field box when it should only have numbers](#)

## Description

### Steps to Reproduce :

1. Enter the Domino's Pizza app
2. Go to the left top menu in the corner and choose the option "Student discount"
3. Press on the link "Get your Meecenat student discount"
4. Scroll down and press the blue tab "Till rabatten" under the coupon 2 för 1 på alla pizzor
5. Type your Identity number and involve letters then press continue

**Actual Result :** Writing letters in the field box of the identity number recognition is moving me to the next page

**Expected Result :** Expect that the app won't let me to write letters and only numbers in the place where it was meant

[DP-18] [I can add signs like @@@ at my email address when I register to student discount](#)

### Description

#### Steps to Reproduce :

1. Enter the Domino's Pizza app
2. Go to the top left menu and press the "Student discount"
3. Scroll down and press the link "Get your Mecenat student discount"
4. Scroll down to the blue tab "Till rabatten" and press on it
5. Enter an email address but with several different signs

**Actual Result :** The app will accept the wrong address and move you to the next page

**Expected Result :** I would expect to get a message that the email address is invalid

The system accept the signs instead of my full name and moving me to the next page

Profile History Locations Home

Severity: S3 - Major

## Description

### Steps to Reproduce :

1. Enter to Domino's Pizza app
2. Scroll down to the "Profile" tab and press it
3. Press in the new window on the tab -"Register here"
4. Write wrong details "%#" in the box field under the full name field
5. Press on the "Register member"

**Actual Result :** After writing wrong signs in the full name box, I can go forward to the next page when I press "Register member"

**Expected Result :** Expect that the system won't register me with wrong full name that contains different signs "%#" instead of letters

[DP-20] [Accessibility options for people with disabilities are not display on the app](#)

Created: 04/May/24 Updated: 05/May/24

Status: To Do

Project: Dominos Pizza

Type: Bug

Priority: Medium

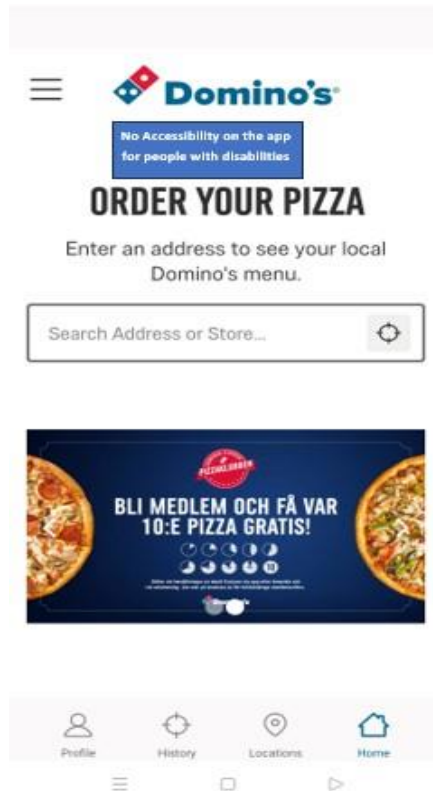

Reporter: Tomer Darmon

Assignee: Unassigned

Environment:

- One plus 11 5G  
Android version : 14
- Samsung Galaxy S10  
Android version 12

Attachments:

Severity: S3 - Major

#### Description

##### Steps to Reproduce :

1. Enter the app Domino's Pizza
2. Check for accessibility symbols on the screen

**Actual Result :** There is no any symbol for accessibility tools for people with disabilities.

**Expected Result :** Expect that the app would be accessible for people with disabilities and would offer them several options to make the use in the app better and easier for them.
